

Visit Explore Discover Grow

Year round, visitors to the Preserve encounter an outdoor natural museum of native plants that grow on its 134 acres. Explore the diverse habitats that include hardwood forests, meadows, steep hillsides, a creek, ponds and other wetlands and the fauna that depends on them. Discover how the Preserve connects visitors with the essential unity of nature and humanity.

Come walk the trails to see what's growing in this living museum then visit our Native Plant Nursery to bring a piece back to your garden.

Experience what's natural | Learn what's native

Hours:

July - March

Wed. - Mon. 10 am - 4 pm
Last entry at 3 pm

April - June

Open daily 9 am - 5 pm
Last entry at 4pm

Note: All exit gates lock at 4 pm, no re-entry

Admission:

Members: Free
Non-members: Admission fee

THANK YOU to all of our volunteers that are helping with the Aquetong Meadow restoration efforts.

Kind Earth Growers

November Highlights

Winterberry Holly *Ilex verticillata*. The bright red fruit of this native shrub almost glows against the stark late fall landscape. Like all other hollies, the winterberry holly only produces fruit on the female plants. Unlike the well known American holly, winterberry is deciduous. The fruit is primarily eaten by winter resident birds. Find winterberry in the Visitor Center garden, the parking lot and along President's Drive.

Hickory *Carya* species. We have several kinds of hickory trees at the Preserve and their nuts are easily found along many of the trails. The mockernut hickory, *Carya tomentosa*, is the largest, while the bitternut, *Carya cordiformis*, is the most common. Comparing the bark of hickory trees will help to identify the shagbark hickory, *Carya ovata*, since the bark looks like it is peeling off the trunk. Hickory nuts are prized by wildlife and eaten immediately or cached for later.

Blackhaw Viburnum *Viburnum prunifolia*. The dark fruits of this deciduous shrub become obvious once the leaves fall, making them easy targets for hungry migrating and resident birds. Though not as common as other viburnum species, the blackhaw's fruits ripen later in the season, offering nutrition weeks after the others have been consumed.

Sweetgum *Liquidambar styraciflua*. Native to the coastal plain, the prickly seed pods of this tree are familiar to many. Each spherical ball contains 80-120 holes that open like a bird's beak, releasing tiny seeds. Many species of birds eat the seeds either by holding onto the balls while they are still on the tree or by feeding on them from the ground.

Black Walnut *Juglans nigra*. These large spherical nuts start out green, but quickly turn black as they rot after falling from these trees. The nuts are edible but bitter, and the shell is extremely hard so they are best left to the squirrels. Indigenous peoples have used the nuts for food and boiled the sap for syrup. You can find several black walnut trees along the edges of the meadows and near the New Pond.

American Beech *Fagus grandifolia*. Finding a beech nut in November may prove difficult since they are coveted by so many of the critters that call the Preserve home. Chipmunks, squirrels, opossum, raccoon, turkey and many other birds seek out the sweet meat of the beech as soon as they drop. The unusual twin triangular nuts are enclosed in a spikey husk that splits when the nuts are ripe. Beech trees are common along low-lying trails and can be easily identified in winter by their smooth gray bark and persistent brown leaves.

Paths to follow

EASIER

Penn's Woods to New Pond

One of our most gentle trails, past the Moss Garden and magnolias. Good for strollers and most wheel chairs.

New Pond Loop

View the wonderful native plants and animals that live in this special place. Handicap parking nearby. Some rough paving.

New Pond to Stone Bridge

(via President's Dr.)
Walk down this shady road to the 1934 WPA Stone Bridge to view Pidcock Creek.

Stone Bridge to Azaleas at the Bridge

Stroll along Pidcock Creek and take a break on a peaceful bench.

Gentian to Founders' Pond

Visit our secluded pond and experience this natural spring-fed habitat.

MODERATE

Cabin Path to Stone Bridge

Walk down to the historic American chestnut log cabin. Take care on the stairs down to the Stone Bridge.

Azalea to Millrace Dam

This gentle wide trail will take you down to the dam on Pidcock Creek.

Fern Trail to Gentian to Founders' Pond

These trails meander through the forest to bring you to a woodland pond.

Stone Bridge to Poconos Laurel

A brisk walk uphill from the creek rewards the effort with a visit to the most remote part of the Preserve

NOVEMBER HIGHLIGHTS

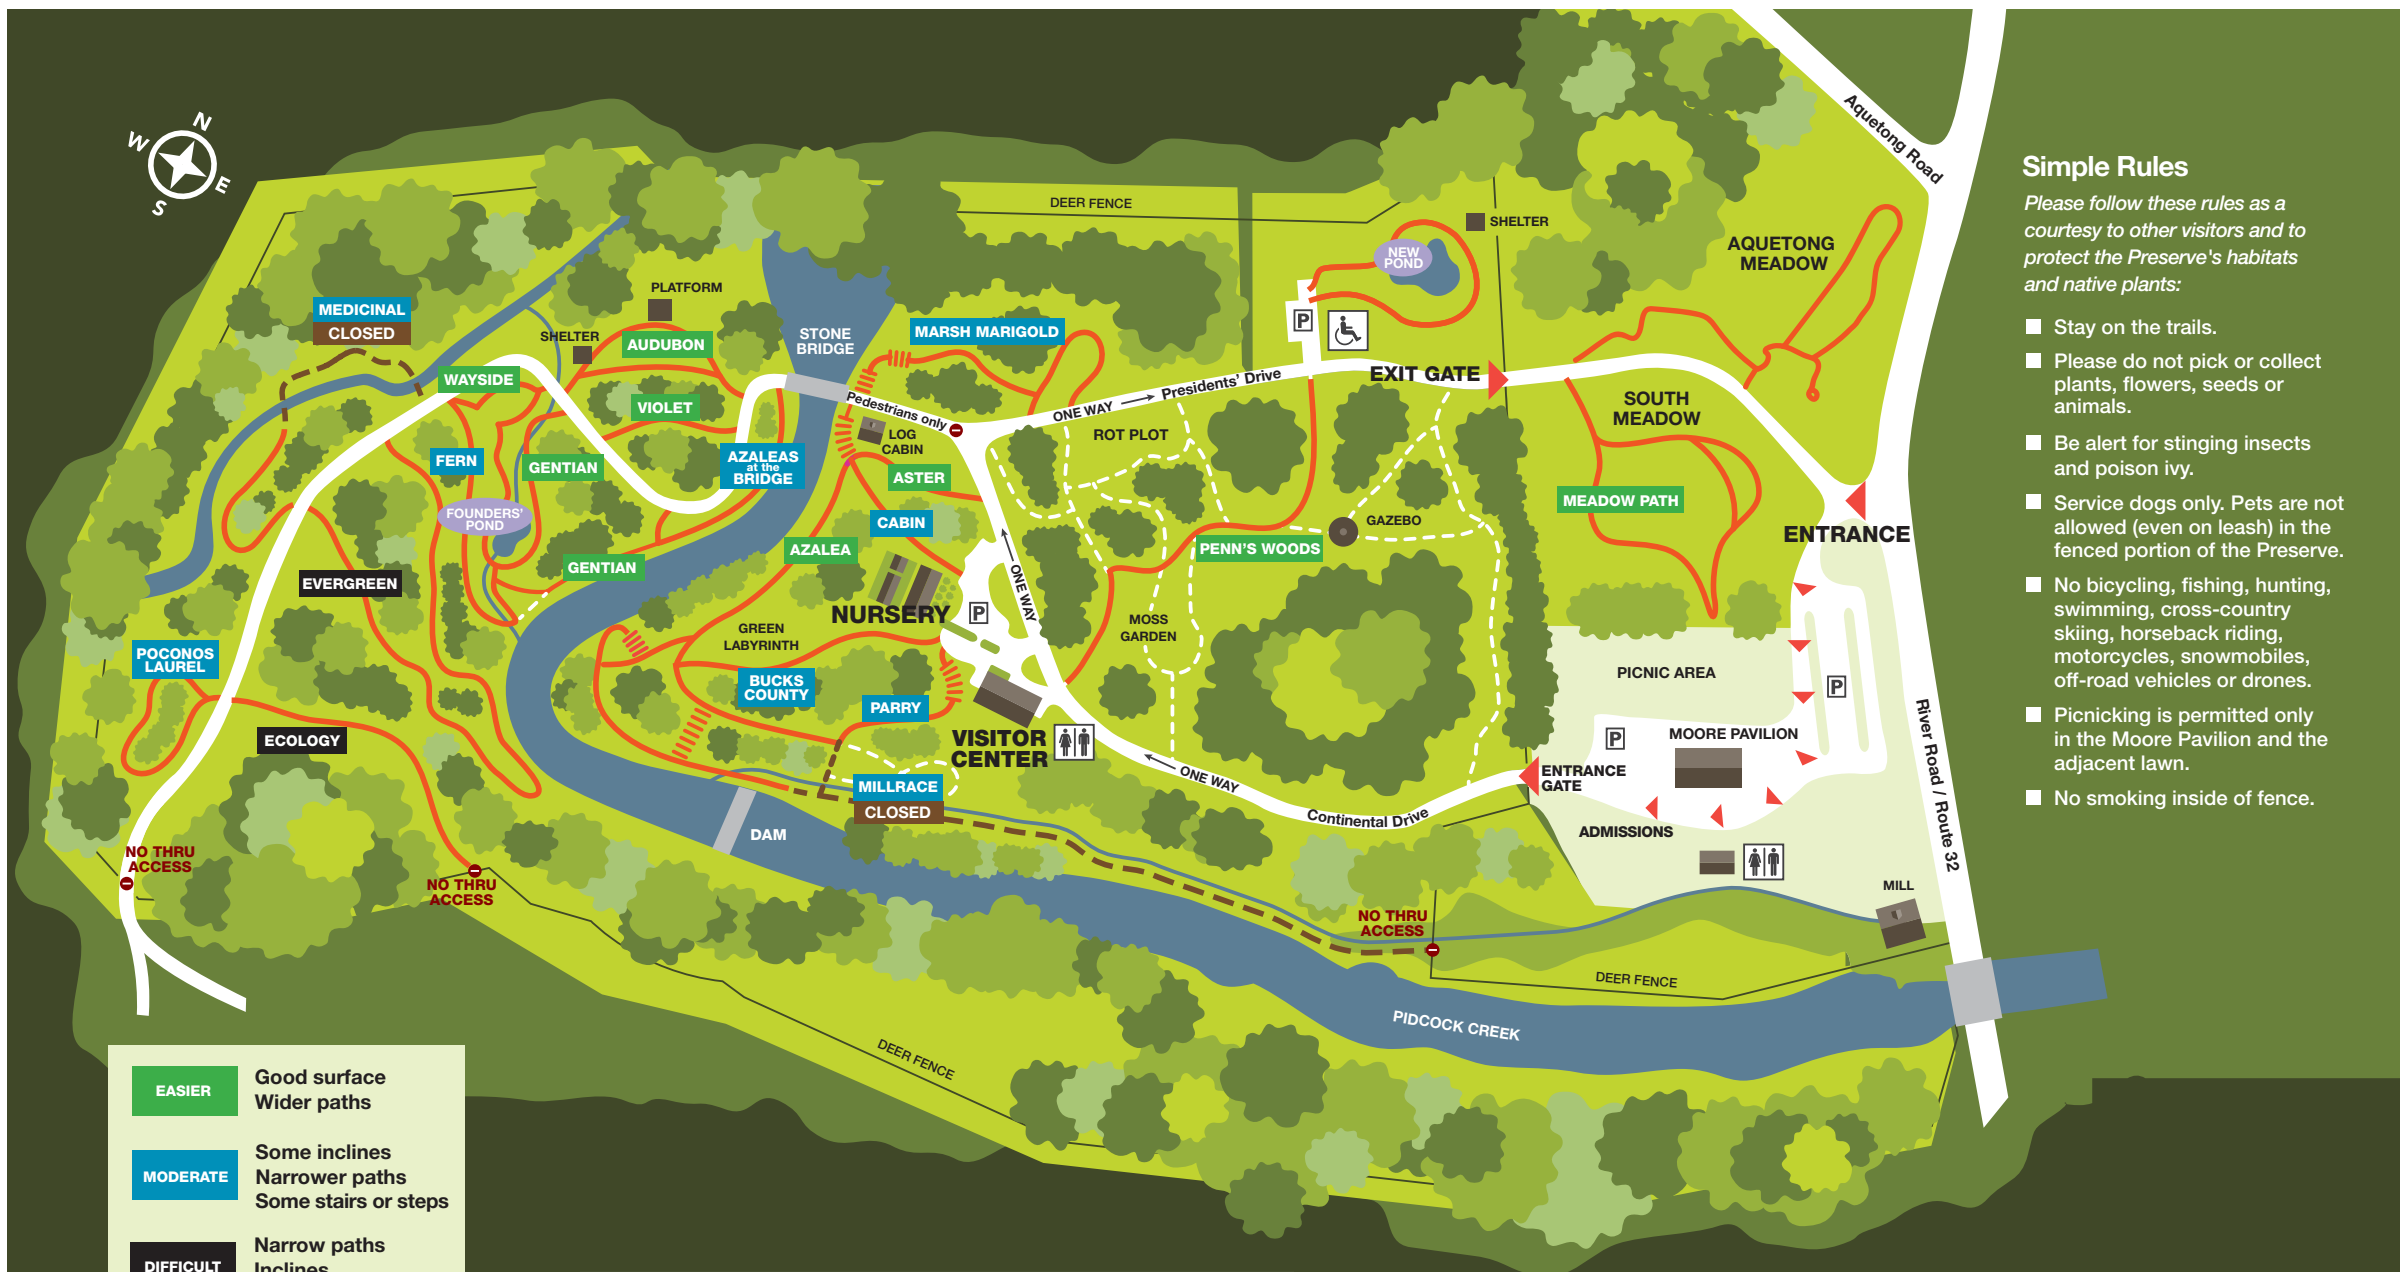

The fruits and colors of autumn!

- New Pond Loop
- South Meadow
- Founders' Pond
- Bucks County Trail
- Visitor Center Garden
- Penn's Woods

Simple Rules

Please follow these rules as a courtesy to other visitors and to protect the Preserve's habitats and native plants:

- Stay on the trails.
- Please do not pick or collect plants, flowers, seeds or animals.
- Be alert for stinging insects and poison ivy.
- Service dogs only. Pets are not allowed (even on leash) in the fenced portion of the Preserve.
- No bicycling, fishing, hunting, swimming, cross-country skiing, horseback riding, motorcycles, snowmobiles, off-road vehicles or drones.
- Picnicking is permitted only in the Moore Pavilion and the adjacent lawn.
- No smoking inside of fence.

- EASIER** Good surface
Wider paths
- MODERATE** Some inclines
Narrower paths
Some stairs or steps
- DIFFICULT** Narrow paths
Inclines
Rocky sections

The Preserve CLOSSES at 4:00 pm. All gates will lock at this time.
No re-entry through pedestrian gates. They will lock behind you.
For Meadow Trails access, please park in the lots outside of the fence.
